

One scan replaces every business card at your event.

A digital event pass that turns visitor–exhibitor introductions into instant, structured, two-way data — for organizers, exhibitors, and visitors alike.

Talk to us about your event

No cards. No brochures. No forgetting who you met. Just a scan — and everything, for everyone, captured instantly.

THE CORE PROBLEM

Visitors already register once. Then they repeat it by hand, all day, at every stall.

Business cards, brochures, and diary entries can't keep up — and everyone pays for it afterward.

Visitors

Walk away with a pile of cards and brochures they'll never look at again, with no easy way to follow up.

Exhibitors

Collect illegible or lost cards, then spend days retyping them — by which time many leads have gone cold.

Organizers

Have no real data on how the event performed, and nothing concrete to show exhibitors as proof of value.

HOW EXIPASS WORKS

One scan. Instant, two-way exchange.

1

Register once

A visitor signs up for the event and gets a digital pass with a personal QR code — no repeated forms after that.

2

Scan a stall or a person

They scan a stall's QR poster or another attendee's pass — the exhibitor does nothing but display a poster.

3

Both sides get everything

Full contact details, brochures, and links exchange instantly — saved digitally, structured, ready to use.

THE HEADACHE YOU ALREADY KNOW

Kill the registration desk. Go fully tech-forward.

Queues, printed badges, walk-in forms, and a desk team scrambling on day one — that's what visitor registration usually looks like. ExiPass removes it entirely: visitors arrive with a pass already in hand, generated the moment they registered online.

- No desks, no printed badges, no walk-in queues on entry day.
- Zero data-entry staff needed — every registration is already digital and structured.
- Positions your event as a modern, tech-forward exhibition — a visible upgrade over paper-based competitors.

OLD WAY

- Long queue at a manned desk
- × Paper forms filled by hand
- × Staff re-typing details later
- × Printed badges to manage

WITH EXIPASS

- One scan, done — badge already on their phone
- ✓ Registered digitally, in advance
- ✓ Zero desk staff required
- ✓ Walks straight onto the floor

FOR EVENT ORGANIZERS — BUILT AROUND WHAT YOU NEED

Run a fully digital event, with none of the manual overhead.

No registration desks to staff, no paper to reconcile, no guessing how the event went. Everything is captured automatically and lands on one dashboard — with real proof of value to sell next year's exhibitors and sponsors.

- **Live event analytics** — total visitors, stall interactions, active exhibitors, scan volume, visible as it happens, not estimated afterward.
- **Exhibitor self-registration** with a simple one-click approval workflow — no paperwork chasing.
- **A structured, exportable database** of every visitor and exhibitor — a lasting asset you can analyze, report on, and use to win better sponsors next time.
- **Higher exhibitor satisfaction** — real, usable leads instead of illegible cards reflect directly on your event's reputation, driving renewals.
- **Configurable access modes** — open networking or stricter, verified-only contact sharing, per event.
- **One central portal** for exhibitor approvals, event configuration, and access control — nothing scattered across spreadsheets and inboxes.

FOR EXHIBITORS

Zero effort at the stall. A ready-to-work lead list afterward.

No app to install, no scanning, no training — a visitor scans the stall's QR poster, and that's the entire interaction required.

- **Instant, structured leads** — full visitor details appear the moment they scan.
- **Hot / Warm / Cold tagging** with private notes on every lead.
- **One-tap CSV/Excel export** of the full lead list.
- **Public and private messaging** to follow up immediately, no personal number needed.
- **A private, isolated dashboard** — their leads, and only their leads.

FOR VISITORS

Register once. Scan everywhere. Nothing to carry.

No repeated forms, no handwriting, no lost cards — every stall visited and every person met is saved automatically.

- **One-time registration**, remembered across the whole event.
- **Instant two-way exchange** on every scan — contact details, website, Instagram, even brochures.
- **Direct save** to contacts, WhatsApp, email, or call — right from the app.
- **Inter-visitor connect** — network with other attendees, not just stalls.
- **A structured personal record** of the whole event, accessible afterward.

BEYOND EXHIBITOR LEADS

A real networking layer for the whole event

Visitors can scan another attendee's pass to exchange contact details instantly — the same zero-friction mechanic used for stalls. The exhibition stops being a one-way flow of leads and becomes a place attendees build real connections with each other, too.

WHY IT MATTERS LONG-TERM

Every interaction becomes structured, reusable data — not paper that gets thrown away.

For an exhibitor, that's a real, searchable, exportable customer list — the foundation of post-event sales follow-up. For an organizer, that's a genuine record of the event's performance — something to show next year's exhibitors and sponsors, and to improve the event year over year. This is the difference between an exhibition that happened, and one that produced something lasting.

Bring ExiPass to your next event

We'd love to walk you through a live demo and talk about your event's setup.
